# CCDL

CHECK CASE DEFINITION LANGUAGE

high-level
test specification language

The intuitively readable test specification language CCDL automates the requirements-based system testing and equipment testing on real-time test benches.

With CCDL you specify test stimulations and expected system reactions in a simple and unambiguous way which eases the creation of sophisticated test scenarios for efficient and in-depth testing. CCDL automatically executes, evaluates and visualizes each test run and reports the behavior of the system under test.

Razorcat

CCDL is a test specification language that provides a dedicated high-level and easily applicable test language for powerful requirements-based system testing. The fully automated test execution and evaluation shortens testing cycles and reduces required manpower.

Testing with CCDL – major features

- Powerful requirements-based system testing
- Fully automated test execution and evaluation
- Intuitively readable and easy to learn
- Reduces manual test tasks and documentation efforts
- Defining test stimulations and expected reactions in a human readable format
- Executes in real-time on the test bench
- Open test engine interface to connect arbitrary test benches
- Visualization of the test execution flow
- Open interfaces to test management solutions

Requirements-based testing

Traceability of test results to system requirements and vice versa is one of the most important issues arising while testing safety-critical systems according to aerospace, automotive or medical standards. CCDL automatically evaluates the SUT behavior and reports results based on requirement annotations within the test procedure.

Real-time black box testing

CCDL is applicable for black box system testing with input and output interfaces which are used for stimulation and checking of expected system reactions. The CCDL test procedure is automatically compiled into an executable test control program that runs as real-time process on the test bench.

Test management integration

CCDL has open interfaces to test management solutions and it is already part of our Integrated Test Environment (ITE).

Easy to use

The intuitively readable CCDL test specification reduces documentation efforts and the visualization of the test execution flow reveals the dynamic behavior of the system under test. It clearly spots any deviations against the expected results.
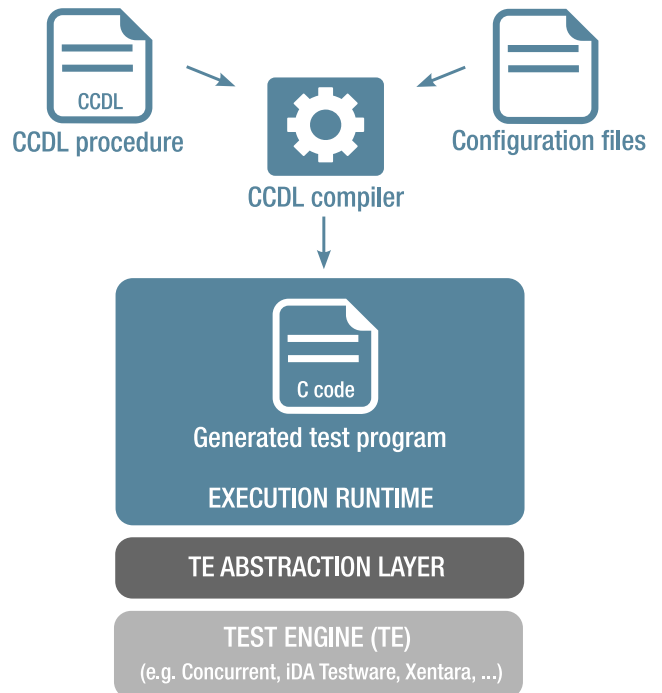

Test bench interfaces

A well-defined interface to the underlying test execution engine allows running tests written in CCDL on any test tool that provides the required functionality. You will find all currently supported test benches at our web page.
